ABAYOMI FABIYI

Software Engineer · Full-Stack · Backend-Heavy

Lagos, Nigeria | pharbeeyee16@gmail.com | github.com/succinct-cyber | https://www.linkedin.com/in/yomi-fabiyi-86073a18a | yomi-fabiyi-succinct.lovable.app

PROFESSIONAL SUMMARY

Full-stack software engineer with 5+ years of hands-on experience building and shipping production-grade web applications across fintech, e-commerce, real-time communication, civic-tech domains, and automated solutions. Backend-heavy by instinct — fluent in Python/Django, DRF, FastAPI, JavaScript, Go, PostgreSQL, and REST APIs — with a working React frontend and an eye for clean system architecture. Comfortable owning products end-to-end: from database schema and API design to deployment, environment management, and debugging in production. Built OjaEvents, a full-stack event ticketing system and am currently building Corpsly, a civic-tech platform targeting 200,000+ NYSC corps members yearly.

TECHNICAL SKILLS

Languages Python · JavaScript · Go · SQL · HTML · CSS	**Frameworks & Libraries** Django · Fast API · Django REST Framework · React · Node.js
Databases PostgreSQL · SQLite · Supabase · Mongo DB	**DevOps & Cloud** Railway · Render · Git · GitHub · Linux
Tools & Platforms Figma · Canva · VS Code · Postman · Docker · AWS · Swagger	**Concepts** REST APIs · WebSockets · Auth Systems · Payment Integration · CI/CD

WORK EXPERIENCE

Software Engineer (Contract) · **Engrewlabs** · March *2026 – Present | Remote*

- Backend-heavy engineering role delivering automation services, APIs, and full-stack products for Engrewlabs clients.
- Built an Uber-like ride-hailing application — designed backend architecture, real-time location logic, and trip state management.
- Delivered client-facing products across fintech, e-commerce, blog platforms, and personal portfolio sites.
- Maintained high code quality standards across client codebases with Git-based version control and structured code reviews.

Software Engineer (Full-Time) · **Radius Technologies Services Limited** · *Mar 2024 – Mar 2026 | Remote*

- Designed, built, and maintained full-stack web applications across client projects spanning fintech, e-commerce, and enterprise automation using Python, Django, React, Go, and JavaScript.
- Architected and delivered automation services in Python and Go, reducing manual operational overhead.
- Owned end-to-end development lifecycle — database design, API development, frontend implementation, cloud deployment, and version control — across multiple concurrent client engagements.
- Integrated third-party APIs and payment gateways, deploying applications to production environments on Railway and Render with PostgreSQL backends.
- Collaborated across cross-functional teams, translating business requirements into technical specifications and shipped products.

Freelance Software Engineer · **Independent** · *2022 – 2024 | Remote*

- Independently scoped, built, and delivered products for clients across fintech, e-commerce, edtech, and instant messaging verticals.
- Managed full project lifecycle from requirements gathering and architecture planning to deployment and post-launch support.

KEY PROJECTS

Multi-Platform Social Media Intelligence Scraper · *https://github.com/succinct-cyber/Dip-sight-scout*

Stack: *JavaScript · HTML · CSS · GitHub ·*

- Built a Chrome extension integrated with a Python backend.
- Scraped X, Instagram, LinkedIn, TikTok and YouTube.
- Extracted names, usernames, follower counts and publicly available email addresses.
- Used JavaScript for browser automation and Python for processing.

FK Book Crawler — Web Crawling & Monitoring Platform · *https://github.com/succinct-cyber/ FK-CRAWLER*

Stack: *Python · Fast API · Docker · MongoDB · Docker · AsyncIO · Pydantic · APScheduler · GitHub*

- Built an async, resumable web crawler (httpx + BeautifulSoup) that concurrently processed 1,000+ product pages with retry/backoff and zero data loss on interruption.
- Implemented content-hash change detection with a daily APScheduler job, logging new/updated/removed records to MongoDB.
- Designed a secure FastAPI REST API with API-key auth, sliding-window rate limiting, and filtered/paginated endpoints, documented via Swagger.

Equinox Ledger · *equinox-ledger.onrender.com*

Stack: *Python · Django · HTML · CSS · PostgreSQL · Railway · Custom Auth · Payment Flows · JavaScript*

- Built a production-deployed fintech web application with custom authentication, encrypted transaction flows, and an admin dashboard for financial record management.
- Deployed to Railway with PostgreSQL and full environment variable management for secure credential handling.

Corpsly — NYSC Service Year Platform · *In Development*

Stack: *Python · Django · DRF · React · PostgreSQL*

- Civic-tech platform targeting 200,000+ Nigerian corps members yearly — solving PPA posting chaos, redeployment tracking, allowance visibility, clearance automation, and discharge certificate management.
- Built full backend API with DRF across three phased roadmap modules; React dashboard frontend for both corps members and NYSC officials.
- Designed mixed B2G/freemium/B2B2C revenue model for investor presentation.

Heritage Estates — Real Estate Platform · *https://heritage-estates-frontend.onrender.com*

Stack: *Python · Django · DRF · React (Vite) · Tailwind CSS · PostgreSQL · Render*

- Built a full-stack real estate platform for a single-firm client — Django REST Framework API with a React/Vite/Tailwind frontend, translating a Figma design system into pixel-accurate, responsive UI.
- Implemented a filterable property catalogue with combinable filters (purchase type, category, price range, location), JWT authentication, and an inquiry pipeline feeding the Django admin.
- Debugged and resolved deployment-stage issues — CORS misconfiguration, DRF pagination mismatches, and static-file serving via WhiteNoise — to reach a stable production release.

OjaEvents — Event Ticketing Platform · *https://oja-events-1.onrender.com*

Stack: *Python · Django · DRF · React (Vite) · PostgreSQL · Paystack · Render*

- Full-stack event discovery and ticketing system with Paystack payment integration, promo code validation, saved events, and a real-time booking flow.
- Fixed N+1 query bug on event list endpoints via queryset annotation, eliminating page load lag.

Goodnews Merch — E-Commerce Platform · *goodnewsmerch. store*

Stack: *Python · Django · SQLite · JavaScript · HTML/CSS · PostgreSQL · Railway/Render · Supabase · Paystack · Flutterwave*

- Dual cart logic (session-based for guests, authenticated for users) with zero cart-state loss across login transitions.
- Full checkout pipeline: product → cart → order → confirmation with Django admin management layer.

EDUCATION

B.Eng. — Electrical & Electronics Engineering · **Federal University of Technology, Akure (FUTA)** · *2018 – 2024 | Akure, Nigeria*

Backend Development with Python & JavaScript · Udemy · 2022 | *Online*

Full-Stack Development — Django, React, HTML, CSS · Udemy · 2024 | *Online*

Certifications · freeCodeCamp · **Coursera · Rathan Kumar** · 2023 | *Online*
